

Negotiation Brief: Proposed NeuroWorks AI Digital Workforce Platform

TO: Executive Leadership
FROM: Pia, Procurement Officer
DATE: July 15, 2026
RE: Demo Day Scheduling & Negotiation Preparation Strategy

1. Demo Day Scheduling & Notifications

A demo day and negotiation preparation session has been scheduled for **July 27th** [1]. Automated notifications will be dispatched to all key stakeholders to align technical and commercial teams ahead of this session.

2. Total Cost of Ownership (TCO) & Supplier Comparison

To ensure we maximize value, the table below evaluates the proposed NeuroWorks platform terms against our target negotiation positions and alternative solutions.

Evaluation Factor	Proposed Terms	Target Negotiation Position	Alternative Solution (BATNA)
Upfront Setup Fees	Standard setup fee	20% discount on initial setup fees	Lower initial investment with slower phased scaling
Payment Structure	Standard upfront billing	Phased payment plans	Pay-as-you-go utility pricing
Support & Maintenance	1 year post-deployment	2 to 3 years extended support	Standard 1-year SLA, paid extensions
Sector Customization	Standard context packs	Tailored packs for finance, agriculture, health, education, tourism, and NGO sectors	Generic models requiring internal development
Data Sovereignty	Standard cloud-based escalations	Prioritized local inference	Standard cloud hosting with high compliance risk

3. How NeuroWorks Can Position Itself to Prepare

To prepare effectively for the July 27th session, NeuroWorks must position itself strategically around the following pillars:

- **Demonstrate Multi-Sector Readiness:** Showcase immediate capability to deploy tailored context packs across our six target sectors (finance, agriculture, health, education, tourism, and NGOs).
 - **Emphasize Data Sovereignty:** Highlight the platform's local inference capabilities as a key differentiator that eliminates cloud-escalation compliance risks.
 - **Present Flexible Commercial Frameworks:** Arrive prepared with pre-approved concession models, such as offering a 20% setup fee reduction in exchange for a longer-term (e.g., three-year) support commitment.
-

4. Negotiation Strategy: Targets, Walk-Away, and Concessions

- **Target Outcome:** Secure a comprehensive deployment of NeuroWorks meeting all strategic and technical requirements, including full implementation of sector-specific context packs tailored to our specific institutional needs.
- **Walk-Away (BATNA):** If terms meeting our strategic objectives cannot be reached, we will walk away to pursue a slower, phased implementation plan with lower initial capital exposure, or explore alternative AI platforms offering similar functionalities at a more competitive price point.
- **Concession Plan:** To facilitate an agreement, we are prepared to offer a longer-term support contract (extended to three years) in exchange for a 20% reduction in upfront setup fees, and request an extension of standard support from one year to two years post-deployment.

Legal redlines of the final contract fall under Logan's purview; commercial terms and structural levers remain within procurement.
