

Search Results

I searched all accessible folders for files or notes containing **RETRY** (query: `fs.find_in`). No matches were returned ([1]).

Required Information

To create a consolidated document, please specify:

1. **Exact file names or paths** of the source documents you wish to combine (e.g., `C:\Users\Arthur Magaya\Downloads\report.docx`).
2. **Desired output format** (Markdown, PDF, plain text, etc.).
3. **Any ordering or sectioning preferences** (e.g., chronological, by topic).

Once these details are provided, I can read the files (`fs.read_external` or `vault.read`) and produce a single consolidated document as requested.

Assumed: The user expects a combined document from locally stored files, but the specific files were not identified in the initial request.

[1] `fs.find_in` result showing zero matches for "RETRY".
