

NeuroWorks

AI Digital Workforce and Intelligent Organisation Platform

13 July 2026

AI4I Grand Challenge — Track 3 (Development) Adjudication Panel

Re: NeuroWorks — AI Digital Workforce and Intelligent Organisation Platform (Project ID: NeuroWorks)

Dear Panel Members,

I'm submitting NeuroWorks for Track 3 on behalf of our team. NeuroWorks turns a job description into a governed AI digital worker — an agent that plans, calls tools through an allowlisted governance layer, and stops for human approval before anything consequential executes. The attached ten-page proposal makes the technical, product-logic, dataset-provenance, and business case in full; this letter is the short version of why we think it deserves your time.

Three things distinguish this submission, and all three are checkable rather than asserted:

- 1. It runs.** 28 live API routers, ~90 governed tool primitives, 118 passing unit tests, a production PostgreSQL connection live since 11 July, and a governance gate we tested by planting a policy violation and watching it fire. Verification endpoints for every claim are listed in the proposal, Section 3.1.
- 2. AI is used where it earns its place.** Section 2.2 runs every major capability against the sledgehammer test explicitly — including one capability we deliberately did not route through an LLM, because a plain function call was the honest answer.
- 3. We say what isn't done yet.** No signed pilot exists today. A dedicated consent checkbox isn't built. Bias evaluation and native-speaker linguistic review are scheduled, not complete. Each is dated and owned in the proposal rather than smoothed over, including a disclosed security incident from this development cycle — caught, rotated, and reported here on our own initiative.

Where we align with national priorities, we cite the primary documents directly: NDS2 (2026–2030) ¶1152–1153 places AI governance under Priority 5, matching our governance-first posture, and ¶1101–1104 commits to expanding ZCHPC capacity for AI workloads — the same CCE pathway our roadmap uses.

We're a five-person team building toward a live demonstration on 31 July 2026, and toward our first external, before/after-measured pilot task during the Mutare bootcamp. We'd welcome the chance to walk the panel through the live system, and to be held to the specific commitments and dates in the proposal — that's the standard we're asking to be judged against.

Thank you for your consideration.

Sincerely,

Aiia Rubiem

Lead Innovator, NeuroWorks · github.com/RUBIEM-DEVELOPERS-REPO/neuroworks

Live demonstration: Friday 31 July 2026
