

AI Tech Forum Zimbabwe 2026

“Mastering AI Systems: Building Zimbabwe’s Intelligence Edge”

1. Introduction

Zimbabwe is entering a new era of technological advancement, with growing AI research, innovation hubs, and ICT infrastructure supporting education, industry, and government. Despite these gains, there are gaps in AI expertise, computational infrastructure, and advanced algorithm deployment, which limit the country’s ability to compete in high-tech industries and AI-driven economic sectors.

The AI Tech Forum Zimbabwe 2026 is designed for AI experts, researchers, engineers, and technical innovators to discuss cutting-edge developments in algorithms, AI models, and infrastructure, and how these can be applied to Zimbabwe’s unique economic and industrial challenges.

This summit will foster knowledge sharing, collaboration, and technical problem-solving, positioning Zimbabwe as a regional AI innovation leader while supporting the country’s Vision 2030, SADC integration, and AU digital agenda.

2. Preamble.

Artificial Intelligence is a transformational technology capable of reshaping industries, government services, and research in Zimbabwe. The AI Tech Forum provides a platform for experts to exchange technical knowledge, explore emerging AI models, and address the challenges and opportunities specific to Zimbabwe.

This forum aligns with national priorities including AI infrastructure development, computational capacity expansion, data readiness, and policy frameworks, providing a hands-on, technical environment for collaboration, experimentation, and building advanced AI solutions for local and regional needs.

3. Purpose of the Conference

The AI Tech Forum Zimbabwe 2026 conference aims to:

1. To provide a technical knowledge-sharing environment for AI researchers, engineers, and practitioners focused on algorithms, models, and infrastructure.
2. To explore how AI technologies can be applied to Zimbabwe’s national challenges, strengthen technical capacity, and support innovation-driven economic growth.

1. Objectives

- 1.1. Examine advanced AI algorithms, models, and architectures and their applications in Zimbabwe.
- 1.2. Discuss the design, deployment, and optimization of AI infrastructure (compute, storage, and networks).

- 1.3. Share knowledge on machine learning, deep learning, neural networks, and AI frameworks relevant to local industry and research.
- 1.4. Explore data management, data readiness, and integration of public and private datasets for AI applications.
- 1.5. Address AI system performance, scalability, and reliability challenges.
- 1.6. Promote AI research collaboration between academia, industry, and government.
- 1.7. Showcase emerging AI technologies, platforms, and tools
- 1.8. Discuss ethics, governance, and AI policy considerations for high-level AI deployment.
- 1.9. Build a technical roadmap for Zimbabwe's AI development and regional competitiveness.

2. Areas to be Covered

- 2.1. AI Algorithms and Model Development
- 2.2. Machine Learning, Deep Learning, and Neural Networks
- 2.3. AI Infrastructure: Compute, Storage, and Cloud System
- 2.4. Data Readiness: Public and Private Data Integration
- 2.5. AI Research Collaboration and Innovation Hubs
- 2.6. AI Applications in Industry, Government, and Academia
- 2.7. AI System Performance, Optimization, and Scalability
- 2.8. Emerging AI Platforms, Tools, and Frameworks

3. Who Should Attend

- AI researchers, scientists, and data engineers
- Machine learning and deep learning experts
- University and research institute AI faculty
- Industry AI specialists and solution architects
- Government technology leaders and policy-makers in AI
- Developers, engineers, and technical consultants
- Startups and innovators in AI platforms and systems
- Regional AI technical collaborators and SADC/AU partners

4. Event Details

- 4.1. Dates: May 2026
- 4.2. Venue: Nyanga

5. Conference Organisers – Zimpapers and the Artificial Intelligence Institute Africa (AiiA)
