

MINIMUM VIABLE PRODUCT (MVP) DEFINITION DOCUMENT

Project: Virtual Worker Platform (VWP)

Technologies: n8n + Hugging Face

Version: 1.0

Date: 17/02/2026

1. PURPOSE OF THIS DOCUMENT

This document defines the official scope, boundaries, features, constraints, and success criteria for the Virtual Worker Platform (VWP) Minimum Viable Product (MVP).

The purpose of the MVP is to:

- Validate the core architecture (AI → Governance → n8n Execution → Audit)
- Prove value in real operational domains
- Prevent scope creep and over-engineering
- Deliver measurable business impact within a controlled rollout

The MVP is intentionally limited to five operational domains to ensure focus and successful delivery.

2. MVP STRATEGIC OBJECTIVES

1. Demonstrate safe AI-driven task execution.
 2. Prove template-based automation works across multiple departments.
 3. Validate approval governance and audit traceability.
 4. Ensure multi-tenant isolation and RBAC enforcement.
 5. Deliver tangible productivity gains in selected domains.
-

3. MVP SCOPE OVERVIEW

The MVP will focus on the following five domains:

1. Finance
2. Technical Operations
3. Sales & Marketing
4. Logistics
5. Developer (Code & Systems)

Each domain will include 2-3 production-ready templates.

Maximum total templates for MVP: 12-15

4. MVP CORE PLATFORM CAPABILITIES (COMMON ACROSS ALL DOMAINS)

The following capabilities must be operational for MVP success:

- Natural language task submission (UI)
- Template-based task routing
- AI classification and structured input extraction
- JSON schema validation of inputs
- Approval gating for sensitive actions
- n8n workflow execution bridge
- Idempotent execution control
- Immutable audit logging
- Workspace isolation (multi-tenant ready)
- Operational dashboard (basic metrics)

Out of Scope for MVP: - Autonomous multi-agent execution - RPA / desktop automation - Financial payment execution - Automatic system deployment without approval - Bulk campaign automation

5. DOMAIN 1 – FINANCE MVP

5.1 Objective

Automate reporting and documentation tasks while preventing direct financial transactions.

5.2 Templates

1. Expense Summary Generator
2. Inputs: receipts (attachments), date range
3. Output: summarized expense report (PDF/Sheet)
4. Invoice Draft Generator
5. Inputs: client details, line items
6. Output: invoice draft (no payment execution)
7. Monthly Budget Variance Summary
8. Inputs: spreadsheet data source
9. Output: variance analysis report

5.3 Integrations

- Spreadsheet API
- Accounting system (read-only)
- Email

5.4 Governance Rules

- No payment execution
- All accounting system write actions require approval
- All reports logged with source references

5.5 Success Criteria

- 3 templates operational
- Approval gating validated
- Financial summaries generated with traceability

6. DOMAIN 2 – TECHNICAL OPERATIONS MVP

6.1 Objective

Automate monitoring summaries and ticket creation while preserving system safety.

6.2 Templates

1. Incident Summary Generator
2. Inputs: monitoring logs
3. Output: summarized incident report
4. Create Support Ticket
5. Inputs: issue description, severity
6. Output: ticket created in system
7. Weekly System Health Report
8. Inputs: monitoring metrics
9. Output: email summary to ops team

6.3 Integrations

- Monitoring system API
- Ticketing system (Jira/ServiceNow)
- Email/Slack

6.4 Governance Rules

- Ticket creation allowed without approval
- Ticket status changes require approval

6.5 Success Criteria

- Automated ticket creation working
- Incident summary accuracy validated

7. DOMAIN 3 – SALES & MARKETING MVP

7.1 Objective

Automate lead processing and campaign reporting with controlled outbound communication.

7.2 Templates

1. Lead Capture → CRM Entry
2. Lead Qualification Summary

3. Campaign Performance Summary
4. Draft Outreach Email (approval gated)

7.3 Integrations

- CRM system
- Email platform
- Marketing analytics API

7.4 Governance Rules

- CRM write requires approval (MVP safety rule)
- External email send requires approval
- Bulk actions disabled

7.5 Success Criteria

- Lead automation working end-to-end
 - Approval flow validated for outreach
-

8. DOMAIN 4 – LOGISTICS MVP

8.1 Objective

Provide operational visibility and communication support.

8.2 Templates

1. Shipment Status Query
2. Inventory Low-Stock Alert
3. Delivery Summary Report
4. Vendor Communication Draft (approval gated)

8.3 Integrations

- Logistics API
- Inventory database
- Email

8.4 Governance Rules

- No inventory deletion
- Vendor communication requires approval

8.5 Success Criteria

- Accurate shipment lookups
 - Inventory alerts triggered correctly
-

9. DOMAIN 5 – DEVELOPER (CODE & SYSTEMS) MVP

9.1 Objective

Assist engineering teams with analysis and reporting, without executing production changes.

9.2 Templates

1. Pull Request Summary
2. Commit Digest Report
3. Deployment Checklist Generator
4. CI/CD Status Report

9.3 Integrations

- Git repository API
- CI/CD pipeline API
- Documentation system

9.4 Governance Rules

- No automatic merges
- No deployment triggers
- Admin approval required for system-altering actions

9.5 Success Criteria

- Accurate PR summaries
 - CI status retrieval within SLA
-

10. MVP GOVERNANCE MODEL

Across all domains:

- All write operations default to approval-required unless explicitly marked safe.
- All actions are logged in `audit_events`.

- All workflows use idempotency keys.
 - Workspace isolation enforced on every object.
 - Templates versioned and traceable.
-

11. MVP EXIT CRITERIA

The MVP is considered complete when:

1. At least 2 templates per domain are fully operational.
 2. End-to-end execution works across all 5 domains.
 3. Approval pause/resume works reliably.
 4. Audit trail captures AI outputs, approvals, and execution results.
 5. No cross-tenant data exposure occurs during testing.
 6. Basic operational dashboard is live.
-

12. MVP RISKS & CONTROLS

Key Risks: - AI misclassification - Integration instability - Approval bottlenecks - Over-scoping

Controls: - Confidence thresholds - Schema validation - Strict template boundaries - Limit to defined domain templates only

13. POST-MVP EXPANSION (NOT IN CURRENT SCOPE)

- Financial transaction execution
 - Automated deployment execution
 - Bulk marketing automation
 - Autonomous multi-agent workflows
 - Advanced knowledge base integration
-

END OF MVP DOCUMENT
