

Virtual Worker Platform

- Your AI-powered digital operations team
- Executes real business tasks — not just chat responses
- Governed, auditable, enterprise-safe automation
- Built for Finance, Operations, Sales, Logistics & Engineering

The Business Pain

- Finance teams manually consolidate reports every month
- Operations teams create tickets from alerts by hand
- Sales reps re-enter leads across multiple systems
- Logistics staff constantly track shipments manually
- Engineers spend hours reviewing long PRs and logs

How It Works in Real Life

- User submits task in plain English
- AI understands the request and extracts key data
- Platform maps task to approved workflow template
- n8n executes across integrated systems
- Approval requested automatically for sensitive actions
- Every action logged for audit and compliance

Real Use Cases

- Finance: Generate expense summaries & draft invoices in minutes
- Operations: Auto-create Jira tickets from monitoring alerts
- Sales: Capture leads → push to CRM → draft outreach email
- Logistics: Pull shipment status & notify customers instantly
- Engineering: Summarize pull requests & CI/CD status reports

Business Impact

- Reduce repetitive digital workload by 40–60%
- Increase operational speed without increasing headcount
- Enforce governance through approval gates & audit trails
- Standardize workflows across departments
- Foundation for scalable AI workforce transformation
